SETTING THE BENCHMARK
FOR **OPERATIONAL EFFICIENCY**
AND **COMPLIANCE**

Asset Management and Plan Review

Track and manage public works

Keep tabs on your existing and upcoming public works projects with the asset management and plan review software from IDT. Our team helps state and local governments nationwide set up and maintain a content system that allows them to easily capture documents, photos, videos, audio and historic papers in one, convenient location. All of that information is then available directly from existing GIS applications, streamlining the process and increasing efficiency.

Integrated solutions

With IDT's asset management solution, all the content you need to complete reviews, inspections, and other processes is stored in a central document repository. Our system connects to your existing permitting and planning systems, so your data and documents are fully integrated with the program. This allows you to manage things like plan revisions, contracts and CAD drawings from the applications your staff uses every day.

Instant access

Our system, powered by OnBase™ and CAPSYS CAPTURE™ software, lets you transform processes with automation, speeding up projects and allowing for simultaneous reviews and improved collaboration. You can safely preserve vital content while providing staff with access to these documents in the field using laptops, tablets and smartphones.

Self-serve capabilities

With easy, online access, this system lets your staff automate processes to provide self-service and online access for your constituents. Users will be able to serve themselves, so your staff can focus on work instead of answering the phone and fulfilling requests. OnBase and CAPSYS CAPTURE ingest and secure documents, connect your databases, and improve processes—all while allowing your people to become more mobile and provide better service.

Our system ingests and secures documents, connects your databases, and improves processes—all while allowing your people to become more mobile and provide better service.

Electronic plan review

The process of managing plan set submissions can often involve large paper plans that require multiple copies. This makes the plan review process time consuming and difficult to manage. With IDT's system, the ePlan submission, review and certification process is automated to make community development and infrastructure initiatives more efficient.

GIS management, streamlined

Give your GIS users access to the document content they need directly from the maps they use every day. Integration for ESRI leverages both investments by connecting documents to geographic map features. Documents related to a map location can be retrieved directly from ESRI with a click, eliminating inefficient application switching. Users can upload documents and create forms directly from the map, automatically indexing them with map feature metadata. Users can display documents on an ESRI map, improving decision making based on location information.

Primary features

- » Submit plans electronically for faster review and approval
- » Collaborate in real time with automated comment tracking and reviews
- » Meet mandated deadlines while reducing paper across the enterprise
- » Submit plans electronically for faster review and approval
- » Collaborate in real time with automated comment tracking and reviews
- » Meet mandated deadlines while reducing paper across the enterprise

Trust IDT for a wide range of government solutions

We understand the complexities of the many systems and processes in government offices. Getting these systems to work together most efficiently takes a consultative, holistic approach. Unlike a single-product manufacturer, IDT has the knowledge and range of products to address a full spectrum of needs.

- » Asset Management
- » Comprehensive Agenda Management
- » Contract Management
- » GIS Management
- » Human Resources
- » Property Tax Appeals Solution
- » Public Records Management
- » Public Safety
