AND COMPLIANCE

Geographic Information System (GIS) Management

Enhance your GIS investment

Maximize the benefits of your GIS with the GIS management solutions from IDT. With the GIS integration functions from OnBase™ and CAPSYS CAPTURE™ software, you can easily link documents, drawings and processes directly to your map software, streamlining the process. Our team helps you make the most of your existing programs to help your staff make decisions and process documents even faster.

Fully integrated

Quickly respond to requests and share information through your Esri™ GIS program. IDT's system gives GIS users the power to attach related information directly to points on a map, so your staff can process documents without ever leaving their familiar GIS environment. Content is just a mouse-click away.

Sharing made easy

Whether staff is in the office or in the field, using separate photos, maps and documents to share information slows down the process. Projects often take longer because information is scattered across filing cabinets and disparate systems, causing delays in getting documents to those who need them. Likewise, the review process is slowed down by the fact that only one person can review a paper file at a time.

With OnBase and CAPSYS CAPTURE integration for ESRI, processes no longer stop while GIS users search for related documents. All of the necessary information—including permits, licenses and other important files—are accessible directly from the maps they use every day. Suddenly, every member of your staff has access to the documents they need, right when they need them.

Up to date

At IDT, we understand how important it is for our technology to stay relevant and useful on a day-to-day basis. Our GIS management system keeps pace with ESRI's current product improvements and supports the latest GIS technology

Suddenly, every member of your staff has access to the documents they need, right when they need them.

CAPTURE™

with ArcGIS Silverlight Viewer and Silverlight API-based applications. We also offer web services to support integration with ArcGIS Flex and JavaScript API-based applications.

Enhanced functions

- » Securely stores information
- » Automates processes to speed up reviews
- » Provides easy information access
- » Improves business process
- » Saves time and money
- » Provides instant access
- » Speeds up processes
- » Reduces employee training

IDT provides document management solutions for:

- » Animal Care & Control
- » Building & Zoning
- » Convalescent Centers
- » Coroner's Offices
- » Election Commissions
- » Facilities Management
- » Family Centers
- » Geographic Information Systems
- » Human Resources
- » IT
- » Prohibition & Court Services
- » Public Defenders
- » Public Works
- » Sheriff's Offices
- » State Attorneys
- » Supervisor of Assessments
- » Treasurer's Offices

Trust IDT for a wide range of government solutions

We understand the complexities of the many systems and processes in government offices. Getting these systems to work together most efficiently takes a consultative, holistic approach. Unlike a single-product manufacturer, IDT has the knowledge and range of products to address a full spectrum of needs.

- » Asset Management
- » Comprehensive Agenda Management
- » Contract Management
- » GIS Management
- » Human Resources
- » Property Tax Appeals Solution
- » Public Records Management
- » Public Safety

IDT's system gives GIS users the power to attach related information directly to points on a map, so your staff can process documents without ever leaving their familiar GIS environment. Content is just a mouse-click away.
