putting paper in its *place*

SETTING THE BENCHMARK  
FOR OPERATIONAL EFFICIENCY  
AND COMPLIANCE

IDT's OnBase™ and CAPSYS CAPTURE™ Technology:

## How It Integrates with Your Current Systems

Increase transparency and improve processing efficiency with our technologies. Designed to be easily integrated into your business model, this system removes unnecessary steps in your data collection, storage and retrieval processes.

Our software reduces the amount of legwork for your staff members and makes it easier to comply with federal, state and local standards.

### Problem #1: Paper and ERP systems don't mix

Many agencies have turned to ERP systems like PeopleSoft™, SAP™, Oracle, JD Edwards™, and Lawson to manage invoice processing, procurement tasks, contract management, credentialing and certifications. Switching between paper and data systems not only slows down staff but also creates more work for them, including taking time to make photocopies and use intra-office mail to transport documents.

### Problem #2: Transparency is less than clear

Paper also derails another government trend: transparency. Constituents, vendors, and staff have difficulty knowing the status of transactions and processes when they are buried in paper documents or trapped in dozens of manual tracking systems created by overworked staff. In addition, the visibility and accountability to the public of government agencies is hampered.

### How OnBase and CAPSYS CAPTURE help

IDT's combination of software connects your ERP with related documents, automates processes, and creates transparency for financial and human resources tasks. OnBase and CAPSYS CAPTURE offer decision makers complete visibility into processes, providing audit trails, real-time reporting and executive dashboards. Capture documents immediately and extract data to reduce or eliminate indexing. Then, notify, view, route and manage documents directly from ERP screens to allow staff to work in their familiar work environment.

## Let IDT help you put paper in its place

Headquartered in Chicago, IDT is a leading provider of information management software solutions for government agencies, municipalities and facilities across the nation. Our innovative system integrates seamlessly with existing systems to automate records management (storage & tracking). This more efficient approach saves time, frustration, space and storage fees—while increasing access/transparency.

## IDT provides document management solutions for:

- » Animal Care & Control
- » Building & Zoning
- » Convalescent Centers
- » Coroner's Offices
- » Election Commissions
- » Facilities Management
- » Family Centers
- » Geographic Information Systems
- » Human Resources
- » IT
- » Prohibition & Court Services
- » Public Defenders
- » Public Works
- » Sheriff's Offices
- » State Attorneys
- » Supervisor of Assessments
- » Treasurer's Offices

## Trust IDT for a wide range of government solutions

We understand the complexities of the many systems and processes in government offices. Getting these systems to work together most efficiently takes a consultative, holistic approach. Unlike a single-product manufacturer, IDT has the knowledge and range of products to address a full spectrum of needs.

- » Asset Management
- » Comprehensive Agenda Management
- » Contract Management
- » GIS Management
- » Human Resources
- » Property Tax Appeals Solution
- » Public Records Management
- » Public Safety
